All invasive, primary, malignant neoplasms except non-melanoma skin cancer were eligible for inclusion. Data consists of both observed and predicted 5-year relative survival. Where sufficient follow-up was not available for recently diagnosed patients the period approach was used to predict 5-year cohort survival. For some European countries data is not available for one or both sexes. 95% LCL and 95% UCL are the 95% lower and upper confidence limits around the five-year relative survival.
