ICD-O-3 M9863, M9875.
 Data consists of both observed and predicted 5-year relative survival.
 Where sufficient follow-up was not available for recently diagnosed patients the period approach was used to predict 5-year cohort survival.
 For some European countries data is not available for one or both sexes.
 95% LCL and 95% UCL are the 95% lower and upper confidence limits around the five-year relative survival.
