

OVERVIEW OF CANCER IN Ayrshire and Arran

Cancer Research UK is committed to accelerating progress so that 3 in 4 people survive cancer by 2034.

This data refers to:
Health Board (HB): Ayrshire and Arran

Compared to average:

'Better' and 'Worse' means that the difference from the average is statistically significant, 'Similar' is when it is not.

AROUND
2,500
CANCER CASES
IN THIS HB

AROUND
1,300
CANCER DEATHS
IN THIS HB

Sept 2018

PREVENTION

Smoking

21.4% of adults currently smoke cigarettes in this HB. This is similar to the Scotland average (21.2%).

ACTION: We're calling for Health Boards to maintain funding for stop smoking services.

Childhood obesity

24.9% of 4-5 year-olds are overweight or obese in this HB. This is higher than the Scotland average (22.9%).

ACTION: We're calling for the Scottish Government to legislate to restrict multi-buy price promotions on junk food.

EARLY DIAGNOSIS

Stage at diagnosis

Early diagnosis (cancer diagnosed at stages 1 and 2) gives patients more effective treatment options, improving their chance of survival.

Only 57.4% of bowel, breast and lung cancer patients with a known stage are diagnosed early in this HB.

Bowel screening

54.9% of people aged 50-74 take part in bowel cancer screening in this HB. This is lower than the Scotland average (55.6%).

This data predates the roll out of the new bowel screening test, FIT, in November 2017.

Diagnostics

STANDARD NOT MET

The National Waiting Times Standard states no patient should wait longer than 6 weeks for 8 key diagnostic tests and investigations.

Of these tests, 40.3% of patients waited longer than 6 weeks for an endoscopy in this HB, and 32.3% waited longer than 6 weeks for a radiology test.

ACTION ON DIAGNOSTIC WORKFORCE: Greater workforce capacity is needed to diagnose cancer earlier. We're calling on the Scottish Government to take action to address immediate and long-term shortages in the diagnostic workforce.

TREATMENT

Referral to treatment

TARGET NOT MET

89.6% of patients in this HB receive their first definitive cancer treatment within 62 days of an urgent GP referral. This is below the national target (95%). The Scotland average, 87.3%, is also below the national target.

31-day waiting times

TARGET MET

99.0% of patients in this HB receive their first cancer treatment within 31 days of a decision to treat. This is above the national target (95%). The Scotland average, 94.7%, is below the national target.
